

CastleSaga NFT - Whitepaper

The Castle Saga NFT collection is a series of unique digital collectibles that represent different aspects of castles, such as rooms, armory, dungeons, great halls and more. Each NFT in the collection will be one-of-a-kind and will represent a specific castle or fortress, with its own history and characteristics.

To complement the NFT collection, a utility token called "CastleSaga Utility Token" can be created. CastleSaga Utility Token can be used for different purposes.

The CastleSaga Utility Token has a staking feature which allows token holders to earn rewards for holding and keeping the tokens locked in their wallets. Staking is a process where token holders can use their tokens to validate transactions on the blockchain and earn rewards in return.

Additionally, staking can also increase the value of the token by creating scarcity and reducing the circulating supply.

The more tokens a user stakes, the higher the rewards they will receive, staking also allows the holders to participate in the governance of the CastleSaga NFT collection, by giving them the ability to vote on proposals and changes to the collection.

This feature allows holders to be more engaged with the collection and incentivizes them to hold on to their tokens for longer periods of time which can improve the overall value of the collection and the token.

Below are the detailed explanation about traits

Age of Castle : Represents how old it is.

Number of Bed Chambers : Represents how many bed rooms are available with respective CastleSaga NFT.

Here are different Défense ranks that you see in CastleSaga NFT:
